POWERFUL PROTECTION FROM WILDLIFE

TRICO® PRO

Dual Action Mode | Long-lasting Protection | Rain Resistant

TRICO® PRO is a scent and taste repellent that protects against deer, elk and moose that browse, rub or debark seedlings, trees and shrubs. TRICO® PRO provides effective control of deer damage to vulnerable, deer attractive agricultural and forestry plants, providing effective control for up to 6 months.

Ensure young seedlings and plantings have undisturbed growth.

FORESTS IN AMERICA

America's national forests have faced numerous disasters including wildfires, biodiversity, deforestation, droughts, and pests and disease outbreaks. Compounding these disasters is the increase in deer population resulting from favorable habitats and reduced predation associated with human development. An overabundance of deer is limiting regeneration of the forest understory.

To overcome these challenges, reforestation is key to sustaining healthy climate resilient forests for the future. In November 2021, the REPLANT ACT, part of the Infrastructure Investment and Jobs Act, passed. This effort is aimed at building up reforestation capacity and damaged forests.

Obstructive fencing is not a preferred alternative due to its high costs. Alternatively, TRICO® PRO, the proven protection and lasting defense effectively deters browse by deer, elk and moose.

INNOVATION MEETS TRADITION

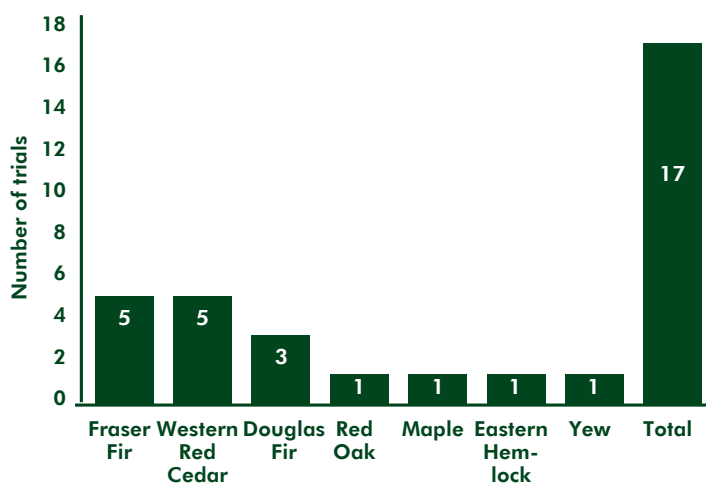

European farmers and foresters have long used sheep wool to protect their crops and trees. However, its application was labor intensive, time consuming, and protection was short lived. Seeking to overcome these issues, Kwizda Agro sought to develop a natural alternative. Through our expertise and experience in developing highly effective and innovative formulations, Kwizda Agro took 'sheep fat', a natural active ingredient, to create a powerful and effective deer repellent named TRICO® PRO.

EFFICIENT TOOL FOR MODERN FOREST MANAGEMENT

TRICO® PRO is a deer repellent developed to provide forest owners and managers with a practical and cost effective solution to protect their trees against browsing, antler rubbing and debarking damage. The specially designed formulation of TRICO® PRO ensures an easy and fast application, provides long lasting protection and has excellent plant compatibility. TRICO® PRO effectively repels game through taste and smell and is completely harmless to humans and animals. Proven efficacy with over 20 years of commercial use in Europe and over 17 North American & Canadian registration trials.

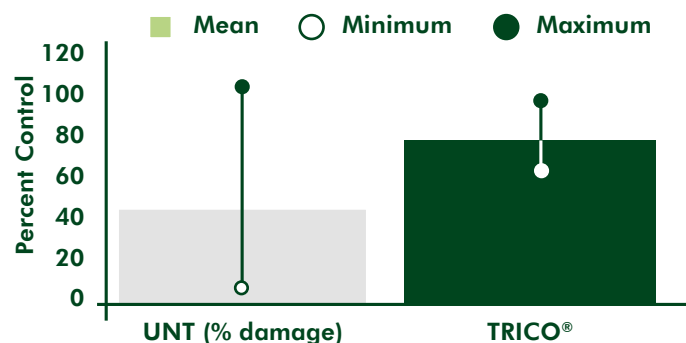

TRICO® PRO RESEARCH

INDUSTRIAL FORESTRY

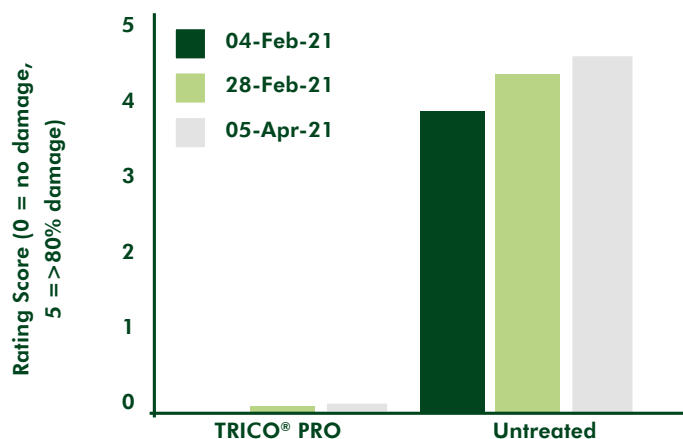

Fifty eight percent of forestland is privately owned. Local, tribal, state, and federal governments manage the remainder. TRICO® PRO is a product that assists the large-scale forester to reach their reforestation targets. In areas with high browsing pressure, this product can make the difference between success and failure for tree species that are preferentially selected by deer, elk and moose. Highly effective, TRICO® PRO's long-lasting benefits reduce the effort and expense when compared to alternative protection strategies.

2017 to 2021. Mean of 7 trials in Canada (Ontario, British Columbia) & US (New York) against White-Tailed Deer, Black-Tailed Deer and Roosevelt Elk

NURSERY TREES

Whether your production is “ball and burlap,” “potin-pot” or “bagged root” increasing plant survival is paramount. Discouraging browsing by deer, elk and moose can also conserve native species in conservation settings. Applying TRICO® PRO in the nursery ensures your customers trees are protected from the moment they are planted while saving application costs in the field. TRICO® PRO is suitable for spring and autumn planting.

CHRISTMAS TREES

The US is one of the world's leading producers of natural Christmas trees. Growing and harvesting quality Christmas trees like pine, spruce, and fir for the consumer and commercial markets is essential to meeting the growing demand for natural and sustainable trees. TRICO® PRO protects your valuable production. Its easy-to-apply spray is transparent when dried on the seedling or sapling and is completely harmless to animals and humans.

SMALL WOODLOT FARM

Forest practices that encourage the immediate regeneration of new trees is essential for sound forest management, long-term forest health, and productivity. Letting in more light allows shrubs and trees to thrive. Wildlife benefits from increased food sources and the woodlot owner from a harvest of timber. TRICO® PRO is a simple to use repellent that protects all tree species from all types of deer. Harmless to the deer it protects them as well as your new forest stand.

MANAGEMENT BEYOND FORESTRY

TRICO® PRO when diluted protects field crops, vegetables, vineyards, orchards and berries from browsing by deer, elk, and moose. Hardly detectable to humans, but highly repellent to animals, it provides a very strong scent and taste barrier. TRICO® PRO provides effective control of damage to vulnerable, deer attractive agricultural plants.

ADVANTAGES OF TRICO® PRO

EFFECTIVE

- Discourages damage from browsing, rubbing and debarking
- Dual mode of action repels through taste and smell
- Protects all tree species

PRACTICAL

- Ready to use
- Apply with a backpack sprayer
- Increase productivity. Reduce man-hours

NATURALLY SOURCED

- Sustainable active ingredients
- Suitable for all terrains
- Safe to humans and animals

SUPPORTIVE

- Protect seedlings to mature tree
- Flexible reforestation options
- Registered and sold in 21 countries in Europe and US

RELIABLE

- Applied to over 200 million trees annually
- Rain resistant
- Long lasting protection and damage

COST BENEFIT

- Safeguards seedling investment
- Avoid costly replanting due to deer browse and damage
- Apply at nursery to save time and labor
